

MP stands for Matched Precipitation. An MP rotator is water saving irrigation equipment that converts spray heads easily. MP rotators reduce water use while making the irrigation systems more efficient.

# ***Reduce Your Use!***

## **MP Rotator Sprinkler Heads**

**Palmdale Water District now offers an affordable way to reduce  
outdoor water use by up to 20%!**

Existing pop-up spray heads can be converted to MP Rotators easily. PWD will rebate \$4.00 for each MP rotator installed, when converting existing sprinkle heads to MP rotators. Visit [www.palmdalewater.org](http://www.palmdalewater.org) for application and information.

### **Why Switch MP Rotator Sprinkler Heads? Because MPs:**

- Are more efficient than pop-up spray heads
- Do not mist or fog like conventional pop-ups
- Hold up better in the wind
- Reduce runoff because they put down water at a slower rate
- Are great on slopes
- They water better in front of the sprinkler head
- Are adjustable from 45° to 360 and retrofit most brands of sprinklers
- Demonstrate 20%-40% savings over pop-up spray heads
- Are easy to retrofit (unscrew the old ones and put on the new efficient MP rotators)
- Work well at low pressures
