MP stands for Matched Precipitation. An MP rotator is water saving irrigation equipment that converts spray heads easily. MP rotators reduce water use while making the irrigation systems more efficient.

Reduce Your Use!

MP Rotator Sprinkler Heads

Palmdale Water District now offers an affordable way to reduce outdoor water use by up to 20%!

Existing pop-up spray heads can be converted to MP Rotators easily. PWD will rebate $4.00 for each MP rotator installed, when converting existing sprinkle heads to MP rotators. Visit www.palmdalewater.org for application and information.

Why Switch MP Rotator Sprinkler Heads? Because MPs:

- Are more efficient than pop-up spray heads
- Does not mist or fog like conventional pop-ups
- Hold up better in the wind
- Reduce runoff because they put down water at a slower rate
- Are great on slopes
- They water better in front of the sprinkler head
- Are adjustable from 45° to 360° and retrofit most brands of sprinklers
- Demonstrate 20%-40% savings over pop-up spray heads
- Are easy to retrofit (unscrew the old ones and put on the new efficient MP rotators)
- Work well at low pressures
